## **DETAILED ACTION**

## Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, 21, 23-27, drawn to method of inhibiting coronavirus spike protein activity, classified in class 435, subclass 184. If this group is elected, election of species is required.
- II. Claim 14, drawn to assay method, classified in class 435, subclass 5.
- III. Claims 15, 17-20, drawn to binding compound, compositions and treatment methods; unclassifiable because of unspecified structure.
- IV. Claims 16-18, 27, drawn to antibody, compositions and treatment method, classified in class 530, subclass 389.4.
- V. Claim 22, drawn to attenuated coronavirus, classified in class 435, subclass 235.1.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and V are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the attenuated coronavirus, as claimed, can be made by a materially different method such as a conventional method of screening for a virus of decreased virulence.

Inventions III and IV are related to invention I as products and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case, the antibodies or other binding materials can be used in a process of detecting the presence of a coronavirus spike protein.

Invention II is unrelated to inventions I and II-V. Group I is drawn to a method of inhibiting a coronavirus spike protein, while group II is drawn to an assay requiring only a portion of a spike protein. The group II assay can be used to identify the products of group III or group IV; however, a process of identifying a product is not a process of making the product, and products of groups III and IV can be identified and made by materially different methods (e.g., by screening compounds for inhibition of cell fusion). The binding assay of group II is not disclosed as capable of use together with the mutant virus of group V.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, and because each invention requires search not required for the others, restriction for examination purposes as indicated is proper.

Group I contains claims directed to the following patentably distinct species of the claimed invention:

A. Inhibiting by providing exogenous heptad region peptide (claim 3, 23)

B. Inhibiting by providing exogenous antibody (claim 5, 27)

C. Inhibiting by mutating spike protein sequence (claim 21).

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 1, 4, 6-13, 24-26 are generic, and claim 2 is subgeneric.

The species are seen as patentably distinct, because they use materially different products, such that a reference teaching one species would not necessarily render obvious the other species.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the

Art Unit: 1648

case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).Any inquiry concerning this communication or earlier communications from the examiner should be directed to Mary E. Mosher, Ph.D. whose telephone number is 571-272-0906. The examiner can normally be reached on varying dates and times; please leave a message..

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bruce Campell can be reached on 571-272-0974. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
